## Meaningful Use: Clinical Decision Support, Communication, and Coordination

### Success by Design

MEDfx EHR is a completely integrated, web-based point-of-care portlet that is patient-centric in the clinical office setting. Task-driven, EHR creates menu-based patient activities for physicians, extenders, nursing and other clinical support professionals. On-line decision support services help improve compliance with best clinical practices, ensure regular screenings and other preventive practices, identify possible drug interactions, and facilitate diagnoses and treatments.

### Adoptive Workflow

Simplicity of design and obsessive attention to detail create a seamless user experience. MEDfx EHR is both easy to use and incredibly powerful. By embracing “Web Standards” and “Open Technology” in its architecture, MEDfx EHR is on the razors edge of the tech world.

## Features
